-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 August 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2876

DETAILED ACTION

1. Receipt is acknowledged of the Amendment received on 9 August 2006.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 1-13, 16, and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Black (US 2005/0122209) in view of Hohle et al. (US 6,101,477).

Black teaches detecting a proffered biometric at a sensor communicating the system to obtain a proffered biometric sample; verifying the proffered biometric sample, and authorizing a transaction (FIG. 1C). The Examiner notes that though silent to a preset transaction limitations, the Examiner notes that such limitations are an obvious expedient for security (such as maximum

Art Unit: 2876

credit lines, commonly associated with credit card accounts, for example), which the user is notified of, so that the transaction does not complete.

Black is silent to the details of the file structure.

Hohle et al. teaches such limitations (see claim 1). It is clear that the file structure is used for transactions. Hohle et al. teaches biometrics, as well.

At the time the invention was made, it would have been obvious to one of ordinary skill in the art to combine the teachings of Black with those of Hohle et al.

One would have been motivated to do this for convenience for the user (consolidation of applications).

Re claim 4, Black teaches the step of detecting includes detecting a proffered biometric at a sensor configured to communicating with the system via at least one of a smartcard, reader, and network (FIG. 1C). Re claim 5, the Examiner notes that it is obvious that the step of detecting includes at least one of detecting, storing, and processing a proffered biometric sample (FIG. 1C). Re claim 6, Hohle et al. teaches such limitations (FIG. 4). Re claim 7, Black teaches that samples are logged/stored (transaction record paragraph [0126]). The Examiner also notes it's an obvious expedient to keep a log/record of transactions and associated data/information for record keeping purposes. Such logging/recording is conventional with credit card transactions where a signature is captured and stored in addition to credit card numbers, and therefore simply logging the biometric data, which is used for enhanced security, is an obvious expedient. Re claim 8, FIG. 1C teaches detecting/processing/storing at least one second proffered biometric sample (as both the electronic and digital signatures are captured). Re claim 9, FIG. 1C teaches comparing a proffered sample with a stored sample for verification. Re claim 10, Black teaches

Art Unit: 2876

that a comparison between a proffered biometric sample and stored biometric samples includes comparing samples with a sample of at least one of a criminal, terrorist, and cardmember (FIG. 1C), as it is obvious that a proffered biometric is compared to cardmembers to verify that the biometric matches the card member. Re claim 11, the Examiner notes that Black teaches embodiments where the biometric data can be stored on the portable device itself, or remotely (paragraph [0090] +). Accordingly, based upon the desired security, verifying the sample could either use information contained on at least one of a local database, remote database, and a third party controlled database. For example, in the case where the information is stored remotely, the Examiner notes it would have been an obvious expedient to store the information in a database, since databases are well known and conventional in the art, for storing and arranging data that can be fetched and accessed quickly and reliably. Therefore, storing the information on a database is an obvious expedient. Re claim 12, Black teaches the step of verifying includes verifying a proffered biometric sample using one of a local CPU and third party security vendor (FIG. 1C and claim which teaches a local processor/CPU verifying samples). Though Black in some embodiments is drawn to an RFID/transponder, the Examiner notes that Black states that such teachings can apply to smartcards as well (abstract). Re claim 13, a sensor has been discussed above re Black.

At the time the invention was made, it would have been obvious to one of ordinary skill in the art to combine the teachings of Black with those of Hohle et al..

One would have been motivated to do this to have a more convenience for the user (consolidation of applications).

Art Unit: 2876

Though Black/Hohle et al. are silent to notifying a user to proffer a biometric sample (audibly/visually/mechanically/etc. re claim 3) the Examiner notes that it is well known and conventional to provide instructions/notifications to a user engaged in a card transaction, in order to guide them to facilitate completion of the transaction. This is especially well known and conventional with standard credit card transactions where a user interfaces with a terminal that displays instructions to the user.

Re claim 16, the teaching of a transaction limitation being a maximum amount, has been discussed above, re claim 1.

Re claim 18, though silent to a government agency or vendor, Black above teaches remote storing of the sample. It would have been an obvious expedient to store at a government agency or vendor, to facilitate security of the stored samples.

Re claims 19-20, Hohle et al. teaches such limitations (FIG. 4).

3. Claims 14-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Black/Hohle et al., as discussed above, in view of de Sylva (US 2005/0098621).

The teachings of Black/Hohle et al. have been discussed above.

Black/Hohle et al. are silent to a PIN in addition to a biometric, and facilitating selection of an account from two accounts.

The Examiner notes that the use of secondary security procedures, PIN, passcodes, etc. are obvious in the art to supplement security in a system. Along those lines, de Sylva teaches a PIN (paragraph [0030]) and facilitating selection of an account through account records 30, which selects accounts based on user preferences.

Art Unit: 2876

At the time the invention was made, it would have been obvious to one of ordinary skill in the art to combine the teachings of Black/Hohle et al. with those of de Sylva.

One would have been motivated to do this for additional security and for permitting user preferences to be involved in the transaction.

4. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Black/Hohle et al., as discussed above, in view of Wallace (US 5,988,497).

The teachings of Black/Hohle et al. have been discussed above.

Black/Hohle et al. are silent to a second sample to override a transaction limitation.

Wallace teaches multiple tiers of authentication in order to authenticate a transaction that meets certain conditions (abstract).

At the time the invention was made, it would have been obvious to one of ordinary skill in the art to combine the teachings of Black/Hohle et al. with those of Wallace.

One would have been motivated to do this to provide more authentication for certain transactions, as it is known that additional samples can provide more security. The replacing of additional PINs of Wallace, by biometrics of Black is an obvious expedient to provide more secure transactions.

Response to Arguments

5. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

The Examiner has cited the new art to Hohle et al. as discussed above, to teach limitations regarding the file structure, for example.

Art Unit: 2876

Additional Remarks

6. The Examiner has not cited the art to Baer et al. in this action because transaction limitations (spending limits, transaction limits, etc.) are well known in the art, and the current application has not claimed the transaction limitation is independent of a financial transaction limitations of the card, as other related applications by the current applicant have. The Examiner notes that the prior art to Hohle appears very similar in language (file structures) to the current application, though it appears to be from a different assignee.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: (see attached PTO-892), noting Jensen et al. teaches secondary security features to authorize transactions of a certain amount, as conventional in the art.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2876

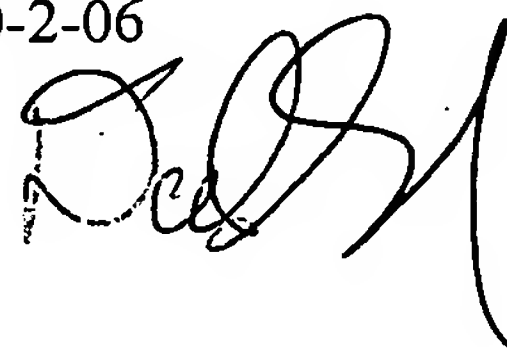

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel I. Walsh whose telephone number is (571) 272-2409. The examiner can normally be reached on M-F 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on (571) 272-2398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
